"Prime Minister Youth Skill Development Program"

**Course Contents / Lesson Plan**

**Course Title:** Huawei HCCDA-AI

**Duration:** 3 Months

<b>Author Name</b>	<b>Cyber Vision/Huawei</b>
<b>Course Title</b>	<b>Huawei HCCDA - AI</b>
<b>Training Objective &amp; Outcomes</b>	Prepare candidates for the <b>Huawei HCCDA-AI certification</b> by covering AI/ML fundamentals, Huawei Cloud AI services, ModelArts, deep learning frameworks, and real-world AI application development.
<b>Entry-level of trainees</b>	<p>Currently enrolled in at least the 7th semester of a bachelor's degree program (i.e., completed 6 semesters with a transcript) OR Pursuing a graduate/postgraduate degree in a relevant field such as:</p> <ul style="list-style-type: none"> <li>• Information Technology (IT)</li> <li>• Computer Science</li> <li>• Mechatronics</li> <li>• Electrical or Electronics Engineering</li> <li>• Computer Systems Engineering</li> </ul> <p>Candidates who have completed a Diploma in Information Technology (DIT) and have relevant field experience such as internships, freelance work, or professional roles in IT, networking, or technical support are eligible for this program.</p>
<b>Minimum Qualification of Teachers</b>	<ul style="list-style-type: none"> <li>• <b>Minimum Qualification:</b> Master's degree (16 years of education) in Computer Science, Information Technology, Software Engineering, Artificial Intelligence, or a closely related discipline from a recognized institution.</li> <li>• <b>Certification Requirement:</b> Must be Huawei Certified — preferably HCCDA-AI (Huawei Certified ICT Associate – Artificial Intelligence) or higher. Equivalent certifications in AI.</li> <li>• <b>Professional Experience:</b> Minimum of 2 years of hands-on industry experience in AI or closely related domains such as machine learning, data science, Cloud-AI integration, or intelligent computing.</li> <li>• Proven ability to design and deliver technical training, conduct assessments, and mentor learners</li> <li>• Experience with project-based learning and supporting trainees in real-world AI applications</li> </ul>

Scheme of Studies	Huawei HCCDA-AI (3-Month Course)					
	Sr. No	Main Topics	Theory Hrs.	Practical Hrs.	Total Hrs.	Credit Hours
	1.	Foundations of AI and Machine Learning	15	0	15	1.5
	2.	Data Science Essentials for AI Development	05	10	15	1
	3.	Python Programming for AI and Cloud Developers	05	10	15	1
	4.	Cloud Fundamentals for AI Applications	05	10	15	1
	5.	AI Application Requirement Analysis and Design	04	11	15	0.95
	6.	Huawei Cloud EI Services & AI APIs	04	11	15	0.95
	7.	Hands-on: Using AI APIs (OCR, NLP, Vision)	03	12	15	0.9
	8.	Introduction to Huawei ModelArts and AutoML	13	2	15	1.4
	9.	Edge AI and Huawei HiLens Service	5	10	15	1
	10.	AI Model Testing, Evaluation, and Optimization	6	9	15	1.05
	11.	Huawei HCCDA-AI Official Training and Exam Review	4	11	15	0.95
	12.	Capstone Project and Certification Readiness	5	10	15	1
	Total		74	106	180	13
Course Execution Plan	Duration of the course: <b>3 months (12 Weeks)</b> Theory: <b>41%</b> Practical: <b>59%</b>					

	<b>Weekly hours: 15 hours per week</b> <b>Total contact hours: Maximum 180 hours</b>
<b>Companies offering jobs in the respective trade</b>	<ul style="list-style-type: none"> <li>• Huawei</li> <li>• Pakistan Telecommunication Authority (PTA)</li> <li>• Telenor/Jazz/Ufone/Banking Industry</li> <li>• National Database and Registration Authority (NADRA)</li> <li>• SAP Pakistan</li> <li>• Accenture Pakistan</li> <li>• Devsinc</li> <li>• ActiveKey Solutions</li> <li>• Fusemachines</li> <li>• Sapphire Consulting Services</li> <li>• Askari General Insurance Company Limited</li> <li>• Beyond Eris Solutions</li> <li>• LN Technologies</li> <li>• Central Training Academy</li> <li>• Peak Solutions</li> <li>• Motive</li> <li>• Azure/AWS</li> <li>• Askari General Insurance Company</li> <li>• Nikon Group of Colleges</li> <li>• 9D Technologies</li> <li>• MTBC</li> <li>• Zeki Expert Solutions</li> <li>• Crossover</li> <li>• Toptal/ Upwork/ Turing/ Fiverr</li> </ul>
<b>No of Students</b>	25 - 35
<b>Learning Place</b>	Classroom / Lab
<b>Instructional Resources</b>	<ul style="list-style-type: none"> <li>• <a href="#">Huawei HCCDA-AI Official Page</a></li> <li>• <a href="#">ModelArts – AI development &amp; deployment</a></li> <li>• <a href="#">MindSpore / TensorFlow – Deep learning frameworks</a></li> <li>• <a href="#">Python (Jupyter/Colab) – Core programming</a></li> <li>• <a href="#">Huawei Cloud – For cloud-AI integration labs</a></li> </ul>

## DETAIL OF COURSE CONTENTS

Module Title	Learning Units	Task/Practical
<b>Introduction to AI &amp; Huawei Strategy</b>	<b>Day 1</b> <b>What is AI? History, types, and scope of AI</b>	<ul style="list-style-type: none"> <li>Define AI and distinguish between weak, strong, and general AI</li> <li>Explore historical evolution of AI</li> <li>Discuss symbolic vs. machine learning AI</li> <li>Identify key domains (vision, NLP, robotics)</li> </ul>
	<b>Day 2</b> <b>AI industry ecosystem, trends, and challenges in adoption</b>	<ul style="list-style-type: none"> <li>Present global AI industry landscape (companies, sectors)</li> <li>Identify AI trends (e.g., GenAI, edge AI, LLMs)</li> <li>Discuss adoption barriers (data, regulation, cost)</li> <li>Use a Gartner Hype Cycle visual</li> </ul>
	<b>Day 3</b> <b>Huawei's AI strategy &amp; open AI capabilities from Huawei Cloud EI</b>	<ul style="list-style-type: none"> <li>Introduce Huawei Cloud EI portfolio (vision, NLP, speech, OCR)</li> <li>Discuss ModelArts, HiLens integration</li> <li>Showcase Huawei's global AI initiatives</li> <li>Map use cases to Huawei capabilities</li> </ul>
	<b>Day 4</b> <b>Overview of AI certification exam: domains, sample questions, and preparation tips</b>	<ul style="list-style-type: none"> <li>Review exam format and weightage by domain</li> <li>Analyze sample questions and answer structure</li> <li>Discuss learning strategy and revision plan</li> <li>Take a short pre-test (10–12 questions)</li> </ul>
	<b>Day 5</b> <b>Quiz + group discussion on AI trends &amp; Huawei strategy</b>	<ul style="list-style-type: none"> <li>Conduct a formal quiz on Weeks 1 content</li> <li>Review each answer with rationales</li> <li>Group debate: AI hype vs reality</li> <li>Trainer Q&amp;A on career scope in AI</li> </ul>
<b>Python for AI (ModelArts tools)</b>	<b>Day 6</b> <b>Python basics review: variables, loops, functions</b>	<ul style="list-style-type: none"> <li>Setup Python 3 environment on ModelArts</li> <li>Review variables, data types, and conditionals</li> <li>Practice writing functions and loops</li> <li>Implement simple logic-based examples</li> </ul>
	<b>Day 7</b> <b>NumPy arrays: creation, operations,</b>	<ul style="list-style-type: none"> <li>Import NumPy and create arrays from lists</li> </ul>

	<b>broadcasting</b>	<ul style="list-style-type: none"> <li>• Apply indexing, slicing, reshaping</li> <li>• Demonstrate broadcasting and matrix multiplication</li> <li>• Solve numerical problems with NumPy</li> </ul>
	<b>Day 8</b> <b>Pandas for data manipulation + Scikit-learn basics</b>	<ul style="list-style-type: none"> <li>• Load datasets with Pandas (CSV/Excel)</li> <li>• Explore dataframes: filtering, grouping, missing values</li> <li>• Train a basic classifier with scikit-learn</li> <li>• Evaluate accuracy with simple metrics</li> </ul>
	<b>Day 9</b> <b>Using ModelArts notebooks: environment setup, code, data access</b>	<ul style="list-style-type: none"> <li>• Launch a notebook on Huawei ModelArts</li> <li>• Upload and organize datasets on OBS</li> <li>• Mount OBS to the notebook environment</li> <li>• Run a test script using built-in tools</li> </ul>
	<b>Day 10</b> <b>Practical: manipulate data using NumPy and Pandas in ModelArts</b>	<ul style="list-style-type: none"> <li>• Import real dataset (e.g., Titanic, Iris)</li> <li>• Clean and transform data with Pandas</li> <li>• Perform statistical analysis using NumPy</li> <li>• Visualize outputs using Matplotlib or Seaborn</li> </ul>
<b>Huawei Cloud EI API Services</b>	<b>Day 11</b> <b>EI overview: image, NLP, OCR, and speech services overview</b>	<ul style="list-style-type: none"> <li>• Introduce Huawei EI platform and service categories</li> <li>• Explain key services: image tagging, speech-to-text, sentiment analysis, OCR</li> <li>• Identify application scenarios for each service</li> <li>• Review sample output and architecture diagrams</li> </ul>
	<b>Day 12</b> <b>Authentication and API calling methods: REST, SDKs (Python)</b>	<ul style="list-style-type: none"> <li>• Set up Huawei Cloud account and create access keys</li> <li>• Install SDK and configure credentials securely</li> <li>• Practice REST calls using Postman and Python requests</li> <li>• Explore rate limits, auth headers, and status codes</li> </ul>
	<b>Day 13</b> <b>Deep dive into General Table OCR API</b>	<ul style="list-style-type: none"> <li>• Explain use cases for table OCR (invoices, reports, receipts)</li> <li>• Understand API parameters and response structure</li> </ul>

		<ul style="list-style-type: none"> <li>• Use API docs to build request body</li> <li>• Review output JSON and extract cell values</li> </ul>
	<b>Day 14</b> <b>Practical: Call and test General Table OCR API</b>	<ul style="list-style-type: none"> <li>• Upload a test table image to OBS</li> <li>• Write Python script to invoke OCR API with image link</li> <li>• Parse response and visualize the extracted data</li> <li>• Handle common errors (timeout, image type)</li> </ul>
	<b>Day 15</b> <b>Practical: Evaluate and log API results</b>	<ul style="list-style-type: none"> <li>• Create multiple test cases with varied tables</li> <li>• Log response time and accuracy for each</li> <li>• Compare results with ground truth data</li> <li>• Generate a simple evaluation report (precision/recall summary)</li> </ul>
<b>Requirement Analysis for AI Integration</b>	<b>Day 16</b> <b>Requirement analysis: techniques and templates</b>	<ul style="list-style-type: none"> <li>• Discuss the role of requirement analysis in AI integration projects</li> <li>• Review requirement elicitation techniques (interviews, observations) Explore templates for functional and data requirements</li> <li>• Analyze a sample AI project requirement document</li> </ul>
	<b>Day 17</b> <b>Functional &amp; non-functional requirements</b>	<ul style="list-style-type: none"> <li>• Define functional requirements for AI systems (input, output, workflow)</li> <li>• Identify non-functional requirements (performance, scalability, ethics)</li> <li>• Use checklist to validate completeness</li> <li>• Group exercise: extract F/NF requirements from a case</li> </ul>
	<b>Day 18</b> <b>Drafting a complete requirement spec for AI projects</b>	<ul style="list-style-type: none"> <li>• Choose a sample AI application (e.g., document classifier, object detector)</li> <li>• Identify stakeholders and user goals</li> <li>• Draft full spec: problem, scope, inputs, expected outputs</li> <li>• Peer review for completeness and clarity</li> </ul>
	<b>Day 19</b> <b>Mapping requirements to Huawei AI tools</b>	<ul style="list-style-type: none"> <li>• Map functional goals to Huawei Cloud services</li> <li>• Choose APIs/models aligned to</li> </ul>

	(EI, ModelArts, HiLens)	use case <ul style="list-style-type: none"> <li>Determine whether edge, cloud or hybrid is best</li> <li>Finalize tech stack and architecture sketch</li> </ul>
	<b>Day 20</b> <b>Assignment: Create a requirement document for a retail analytics system</b>	<ul style="list-style-type: none"> <li>Define use case (e.g., customer traffic analysis, shelf monitoring)</li> <li>Document all functional/NF requirements</li> <li>Map out service architecture using Huawei Cloud</li> <li>Submit and present summary to peer group</li> </ul>
Huawei Cloud ModelArts Introduction	<b>Day 21</b> <b>What is ModelArts: features and UI walk-through</b>	<ul style="list-style-type: none"> <li>Introduce ModelArts platform and its role in AI lifecycle</li> <li>Explore UI: datasets, training, deployment tabs</li> <li>Review service architecture and pricing tiers</li> <li>Navigate built-in tools: notebook, AutoML, pipelines</li> </ul>
	<b>Day 22</b> <b>Using pre-trained foundation models (vision, NLP)</b>	<ul style="list-style-type: none"> <li>Locate and explore ModelArts pre-trained models</li> <li>Run image classification and sentiment analysis demos</li> <li>Examine input/output formats and APIs</li> <li>Customize inputs and compare predictions</li> </ul>
	<b>Day 23</b> <b>Model training lifecycle: datasets, labeling, evaluation</b>	<ul style="list-style-type: none"> <li>Create dataset: upload or link from OBS</li> <li>Label dataset manually or via Auto-labeling</li> <li>Train a model with sample configuration</li> <li>Evaluate results and download metrics</li> </ul>
	<b>Day 24</b> <b>AutoML and experiment management in ModelArts</b>	<ul style="list-style-type: none"> <li>Use AutoML to build model from tabular/image data</li> <li>Compare multiple runs in experiment manager</li> <li>View loss curves and adjust settings</li> <li>ave and export best model</li> </ul>
	<b>Day 25</b> <b>Practical: Fine-tune a pre-trained sentiment model on a custom dataset</b>	<ul style="list-style-type: none"> <li>Select a text-based pre-trained NLP model</li> <li>Prepare and upload labeled custom reviews</li> <li>Fine-tune using ModelArts AutoML or training job</li> </ul>

		<ul style="list-style-type: none"> <li>Evaluate with accuracy/f1 and download model</li> </ul>
<b>HiLens Architecture &amp; Use Cases</b>	<b>Day 26</b> <b>HiLens overview: hardware + architecture</b>	<ul style="list-style-type: none"> <li>Explain HiLens edge AI use cases (retail, surveillance, logistics)</li> <li>Describe device architecture and deployment scenarios</li> <li>Review Huawei HiLens Kit specs and supported models</li> <li>Discuss edge vs cloud inference</li> </ul>
	<b>Day 27</b> <b>Features of HiLens: edge AI, video analytics, event handling</b>	<ul style="list-style-type: none"> <li>Walk through event-driven architecture in HiLens</li> <li>Explore supported video and image formats</li> <li>Understand stream processing and scheduling</li> <li>View real-time camera analytics demo</li> </ul>
	<b>Day 28</b> <b>HiLens SDK and deployment pipeline overview</b>	<ul style="list-style-type: none"> <li>Set up the HiLens development environment (SDK install, device link)</li> <li>Build and package a simple model</li> <li>Deploy model using HiLens pipeline builder</li> <li>Monitor status and debug device</li> </ul>
	<b>Day 29</b> <b>Practical: Deploy pre-built model to HiLens device</b>	<ul style="list-style-type: none"> <li>Choose a vision model (face detection, object tracking)</li> <li>Deploy to HiLens and stream test input</li> <li>Observe inference logs on device and cloud</li> <li>Record results and validate detection accuracy.</li> </ul>
	<b>Day 30</b> <b>Practical: Create simple event-triggered inference application</b>	<ul style="list-style-type: none"> <li>Define a business logic event (e.g., “detect person” = send alert)</li> <li>Write inference + action logic in SDK</li> <li>Upload, test, and validate real-time event output</li> <li>Document edge inference lifecycle</li> </ul>
<b>Deep Learning Concepts &amp; Frameworks</b>	<b>Day 31</b> <b>Neural networks: perceptrons, activation functions, layers</b>	<ul style="list-style-type: none"> <li>Introduce basic building blocks: neurons and layers</li> <li>Visualize forward propagation and loss</li> <li>Discuss activation functions (ReLU, Sigmoid, Softmax)</li> <li>Implement a basic neural net in pseudo-code</li> </ul>
	<b>Day 32</b>	<ul style="list-style-type: none"> <li>Explain CNN architecture for</li> </ul>

	<b>CNNs and RNNs explained with visual demos</b>	image tasks (filters, pooling) <ul style="list-style-type: none"> <li>Walk through RNNs for sequential data</li> <li>Show visual demo of feature extraction and prediction</li> <li>Compare CNN vs RNN use cases.</li> </ul>
	<b>Day 33 TensorFlow vs. PyTorch in ModelArts</b>	<ul style="list-style-type: none"> <li>Compare frameworks in terms of syntax, abstraction, flexibility</li> <li>Run a simple image classifier using both frameworks in notebooks</li> <li>Discuss when to choose one over the other</li> <li>Examine integration support in ModelArts</li> </ul>
	<b>Day 34 Building a CNN with TensorFlow for image classification</b>	<ul style="list-style-type: none"> <li>Load and preprocess image dataset (e.g., Fashion MNIST)</li> <li>Define CNN architecture using Keras (TensorFlow)</li> <li>Train and validate model</li> <li>Plot metrics and review misclassifications</li> </ul>
	<b>Day 35 Practical: Train &amp; test food classification model using ExeML</b>	<ul style="list-style-type: none"> <li>Upload food image dataset to ModelArts</li> <li>Use ExeML to auto-train image classifier</li> <li>Monitor training progress and view performance graphs</li> <li>Test on new images and download inference results</li> </ul>
<b>Model Deployment &amp; Integration</b>	<b>Day 36 ModelArts deployment methods: real-time vs. batch</b>	<ul style="list-style-type: none"> <li>Explain difference between real-time and batch inference</li> <li>Walk through deployment types in ModelArts</li> <li>Select appropriate deployment for use case</li> <li>Explore latency vs throughput trade-offs</li> </ul>
	<b>Day 37 API endpoints, SDKs, and integration best practices</b>	<ul style="list-style-type: none"> <li>Expose deployed model as API endpoint</li> <li>Use Python SDK to authenticate and send input</li> <li>Parse output and handle errors</li> <li>Review common security and versioning practices</li> </ul>
	<b>Day 38 Practical: Deploy and call a model endpoint from a Python script</b>	<ul style="list-style-type: none"> <li>Write a Python client to send request to deployed API</li> <li>Format input based on model type (text/image)</li> <li>Print and log model predictions</li> </ul>

		<ul style="list-style-type: none"> <li>• Test with multiple inputs and handle exceptions</li> </ul>
	<b>Day 39</b> <b>Case Study: Goods Recognition in shopping malls</b>	<ul style="list-style-type: none"> <li>• Review case architecture: camera + HiLens + ModelArts API</li> <li>• Analyze model logic for object detection &amp; tagging</li> <li>• Walk through edge-cloud inference chain</li> <li>• Explore data flow and latency implications.</li> </ul>
	<b>Day 40</b> <b>Practical: Build and test retail goods recognition app</b>	<ul style="list-style-type: none"> <li>• Simulate a product recognition app using image uploads</li> <li>• Trigger inference through API</li> <li>• Display recognized goods and confidence scores</li> <li>• Store results for analytics (optional DB or CSV)</li> </ul>
<b>Testing &amp; Optimization for AI Apps</b>	<b>Day 41</b> <b>Testing methods: unit, integration, system testing in AI</b>	<ul style="list-style-type: none"> <li>• Introduce testing layers in AI pipelines</li> <li>• Design unit tests for pre/postprocessing functions</li> <li>• Discuss integration tests across API/data flow</li> <li>• Identify system testing checkpoints for full pipeline</li> </ul>
	<b>Day 42</b> <b>Role of testing in model iteration and optimization</b>	<ul style="list-style-type: none"> <li>• Define model performance testing (accuracy, latency)</li> <li>• Explore dataset versioning and re-training triggers</li> <li>• Create A/B test plans for two models</li> <li>• Discuss how testing informs tuning</li> </ul>
	<b>Day 43</b> <b>Performance benchmarking and error analysis</b>	<ul style="list-style-type: none"> <li>• Collect prediction logs and latency data</li> <li>• Use confusion matrix for classification error analysis</li> <li>• Identify false positives/negatives and root causes</li> <li>• Adjust threshold or retrain with targeted samples</li> </ul>
	<b>Day 44</b> <b>IoT Device Integration with Edge AI</b> <b>Practical: Write test cases for OCR and classification APIs</b>	<ul style="list-style-type: none"> <li>• Define test inputs and expected results for OCR</li> <li>• Run classification API on noisy data</li> <li>• Validate output format and correctness</li> <li>• Document edge cases and inconsistencies</li> </ul>
	<b>Day 45</b>	<ul style="list-style-type: none"> <li>• Review logs for latency spikes or</li> </ul>

	<b>Practical: Analyze test logs and suggest model improvements</b>	<p>failed calls</p> <ul style="list-style-type: none"> <li>Correlate performance issues with input variations</li> <li>Recommend dataset refinements or model architecture changes</li> <li>Prepare a testing summary report</li> </ul>
<b>MLOps &amp; CI/CD on Huawei Cloud</b>	<b>Day 46</b> <b>Introduction to MLOps &amp; pipeline orchestration</b>	<ul style="list-style-type: none"> <li>Define MLOps lifecycle stages: data, model, code, deployment</li> <li>Identify tools used in Huawei Cloud for orchestration</li> <li>Map traditional DevOps to AI workflows</li> <li>Review examples of automated pipelines</li> </ul>
	<b>Day 47</b> <b>CI/CD integration using ModelArts + OBS + FunctionGraph</b>	<ul style="list-style-type: none"> <li>Configure OBS bucket for model/data storage</li> <li>Set up ModelArts pipeline triggered by data arrival</li> <li>Use FunctionGraph to automate post-inference task (e.g., notification)</li> <li>Run CI/CD loop and monitor</li> </ul>
	<b>Day 48</b> <b>Monitoring &amp; model drift detection</b>	<ul style="list-style-type: none"> <li>Explain model drift (concept and data)</li> <li>Configure CloudEye for monitoring inference performance</li> <li>Set thresholds for retraining based on accuracy drop</li> <li>Log input distributions for comparison</li> </ul>
	<b>Day 49</b> <b>Practical: Build a simple data drift-triggered retraining pipeline</b>	<ul style="list-style-type: none"> <li>Simulate drift with changed dataset</li> <li>Detect drop in model performance</li> <li>Trigger training pipeline via event</li> <li>Deploy updated model and compare before/after metrics</li> </ul>
	<b>Day 50</b> <b>Group discussion: MLOps challenges and solutions</b>	<ul style="list-style-type: none"> <li>Present real-world MLOps pain points (e.g., data lag, brittle models)</li> <li>Discuss reproducibility and traceability</li> <li>Compare open-source vs Huawei pipeline tools</li> <li>Share group recommendations and summaries</li> </ul>
<b>Exam Prep &amp; Certification</b>	<b>Day 51</b> <b>Full-length mock exam 1 + Review</b>	<ul style="list-style-type: none"> <li>Attempt 60-minute mock exam simulating real conditions</li> <li>Score and record performance by</li> </ul>

<b>Focus</b>		domain <ul style="list-style-type: none"> <li>Review difficult questions in group</li> <li>Trainer explains key mistakes and strategies</li> </ul>
	<b>Day 52</b> <b>Domain-wise question practice: APIs, ModelArts, HiLens</b>	<ul style="list-style-type: none"> <li>Solve 5–10 questions per domain (with reasoning)</li> <li>Group discussion: compare thought processes</li> <li>Focus on OCR, ModelArts UI, API endpoints</li> <li>Recap of certification syllabus</li> </ul>
	<b>Day 53</b> <b>Mock exam 2 + Discussion</b>	<ul style="list-style-type: none"> <li>Take a second 60-min mock with new questions</li> <li>Score and self-assess improvement vs Day 51</li> <li>Debrief: what to revise in remaining time</li> <li>Share individual strategy plans</li> </ul>
	<b>Day 54</b> <b>Final tips, time management, and last-minute revision</b>	<ul style="list-style-type: none"> <li>Prioritize key topics (e.g., deployment, API integration)</li> <li>Practice time-boxing and flagging strategy</li> <li>Use flashcards / cheat sheet for memorization</li> <li>Q&amp;A session for final clarifications</li> </ul>
	<b>Day 55</b> <b>Group Q&amp;A session, problem-solving clinic</b>	<ul style="list-style-type: none"> <li>Raise personal doubts from any week/module</li> <li>Solve peer-posted practical or theoretical cases</li> <li>Trainer reviews mock stats and offers guidance</li> <li>Calm nerves: talk exam-day logistics and mindset</li> </ul>
<b>Capstone Project Development &amp; Review</b>	<b>Day 56</b> <b>Project kickoff: choose a domain (e.g., chatbot, smart retail, inspection)</b>	<ul style="list-style-type: none"> <li>Review sample project ideas and constraints</li> <li>Define objectives, data needs, and success criteria</li> <li>Allocate teams or solo roles</li> <li>Draft system architecture</li> </ul>
	<b>Day 57</b> <b>Build project: Data ingestion, training, API deployment</b>	<ul style="list-style-type: none"> <li>Collect or upload training dataset</li> <li>Train initial model using ModelArts or ExeML</li> <li>Deploy as API or HiLens stream</li> <li>Begin writing inference client app</li> </ul>
	<b>Day 58</b> <b>Build project: Testing and presentation draft</b>	<ul style="list-style-type: none"> <li>Write unit and integration test cases</li> <li>Evaluate performance metrics and make improvements</li> </ul>

		<ul style="list-style-type: none"> <li>• Finalize visual presentation: code + results</li> <li>• Conduct dry-run with peer feedback</li> </ul>
	<b>Day 59</b> <b>Capstone project presentations + code demo</b>	<ul style="list-style-type: none"> <li>• Present architecture, training pipeline, results</li> <li>• Demo model in action (API call or HiLens test)</li> <li>• Answer Q&amp;A from peers and instructors</li> <li>• Submit all artifacts (slides, code, logs)</li> </ul>
	<b>Day 60</b> <b>Feedback, certification registration support, closing &amp; celebration</b>	<ul style="list-style-type: none"> <li>• Receive feedback and scores from instructors</li> <li>• Share success stories and lessons learned</li> <li>• Complete official exam registration (if not done)</li> <li>• Certificate distribution + closing remarks</li> </ul>

### LIST OF MACHINERY / EQUIPMENT

For the Class of 35 Students (3-Month Course)

S. No	Name of Items	Quantity/Unit
1.	Intel i5/i7, 8 GB Ram, 250 GB SSD	35
2.	High-Speed Internet Min 25MB	1
3.	Monitors (24-inch FHD/IPS)	2
4.	Backup Power Supply (UPS)	1
5.	Projector / Smart Display	1
6.	Microphone & Speaker System	1

### LIST OF CONSUMABLE MATERIAL

For the Class of 25 Students (3-Month Course)

S. No	Name of Items	Unit
1.	Writing Notebooks	30
2.	Pens (Blue/Black)	60
3.	Markers (Whiteboard)	10
4.	Whiteboard Dusters	2
5.	Printing Paper (A4)	5 Rims
6.	File Folders	30
